

Table Creation

1. Table Creation Query and output

The screenshot shows the pgAdmin 4 interface. On the left, the Object Explorer shows the 'superstore_db' database with a 'public' schema containing a table named 'orders'. The table has 21 columns: row_id (integer), order_id (character varying(50)), order_date (date), ship_date (date), ship_mode (character varying(50)), customer_id (character varying(50)), customer_name (character varying(100)), segment (character varying(50)), country_region (character varying(100)), city (character varying(100)), state_province (character varying(100)), postal_code (character varying(20)), region (character varying(50)), product_id (character varying(50)), category (character varying(50)), sub_category (character varying(50)), product_name (text), sales (numeric(10,2)), quantity (integer), discount (numeric(5,2)), and profit (numeric(10,2)).

The main query editor shows the following SQL query:

```
1 CREATE TABLE orders (  
2     row_id INT,  
3     order_id VARCHAR(50),  
4     order_date DATE,  
5     ship_date DATE,  
6     ship_mode VARCHAR(50),  
7     customer_id VARCHAR(50),  
8     customer_name VARCHAR(100),  
9     segment VARCHAR(50),  
10    country_region VARCHAR(100),  
11    city VARCHAR(100),  
12    state_province VARCHAR(100),  
13    postal_code VARCHAR(20),  
14    region VARCHAR(50),  
15    product_id VARCHAR(50),  
16    category VARCHAR(50),  
17    sub_category VARCHAR(50),  
18    product_name TEXT,  
19    sales NUMERIC(10,2),  
20    quantity INT,  
21    discount NUMERIC(5,2),  
22    profit NUMERIC(10,2),  
23 );
```

The Data Output tab shows the message: "CREATE TABLE Query returned successfully in 125 msec."

2. Import Verification

The screenshot shows the pgAdmin 4 interface with the 'SELECT * FROM orders;' query executed. The Data Output tab displays the results of the query, showing 17 rows of data. The columns are: row_id, order_id, order_date, ship_date, ship_mode, customer_id, customer_name, segment, and country_region.

row_id	order_id	order_date	ship_date	ship_mode	customer_id	customer_name	segment	country_region
